

Non-kernel based Region of Interest View applies to a view that displays both the image and boxes identifying regions of interest. A region of interest contains points known to belong to a classification.

- ROIView \rightarrow OpenGLView? QuartzView?
- Initialize called by either the opening of a nib file or object initialization.
 - “initWithFrame”
 - “awakeFromNib”
- Drawing methods
drawRect
- What do we need:
 - Need ability to identify selected ROI.
 - Overrides on mouse and arrow.
